with Microneedling**

A non-surgical treatment for healthy, smooth,  
and radiant looking skin

## What is Microneedling?

Microneedling, aka Percutaneous Collagen Induction Therapy (PCIT), is a minimally invasive procedure in which controlled and precise injuries to the top layer of skin are made by a device using thin needles. These micro-injuries stimulate the body's recovery response, which causes the production of collagen and elastin, healing factors that promote younger-looking, healthier skin.

## Microneedling Applications

There are multiple applications microneedling can be used on such as:

- Fine lines or wrinkles
- Moderate skin laxity
- Diminished texture, tone, colour
- Enlarged pores
- Loose or crepey skin
- Stretch marks
- Mild scars, especially from acne or burns
- Photo aging
- Skin discolouration or uneven skin tone

## What is E-Pen?

E-Pen is a Health Canada Licensed microneedling pen that utilizes 12 of the highest-quality medical-grade stainless steel needles. With a 7,000 RPM needle pulse, the needles glide smoothly allowing for improved patient comfort.

## Frequently Asked Questions

### What is the Downtime?

After treatment, the skin may be red, swollen, and slightly tender for up to 48 hours, but patients can resume most normal activities the next day.

### When Will I See the Results?

Patients have reported experiencing clearer, brighter, and refreshed looking skin after one treatment. For optimal results, 3-6 treatments with 4 week intervals is recommended.

### What Areas of the Body can I Treat?

The E-Pen can be used to treat the face, neck and body. It is also safe to use for most skin types.
